Speaker with Radio

Ferguson Vibro Radio speaker presents a whole new dimension to the sound emission. Thanks to its vibrations, the music is not only heard but also tangible for the recipient. Placed on a flat surface, the speaker makes the surface to resonate and to act as a subwoofer, highlighting the deep tones. Music propagates around the device, making the sound incoming to the listener in its crystal clear form independently of the position of the listener.

The timbre of the sound depends on the material on which the speaker is placed. The table below shows examples of the characteristics of the emitted sound in comparison with the surface made to resonate:

Material	Audio features
Wood	Rich middle and low tones
Metal	Strong bass
Cardboard	Effect of vinyl
Glass	Clean and transparent sound

Main features:

- Turn any surface into a speaker!
- Made of high quality aluminium
- Offers an Ambient Noise Compensation System
- 20W RMS Power

Meet Vibro Radio speaker:

Streaming of music, device memory

The speaker supports wireless communication based on Bluetooth 4.1, which makes it fully compatible with all devices that support this protocol - among others - smartphones, tablets, laptops, etc. At the same time Vibro Radio offers support for Micro-SD cards, which allows users to play their favorite music straight from the media.

Radio FM

Ferguson Vibro Radio has a built-in FM tuner. Included with the speaker, manufacturer supplies the antenna allows the radio signal reception of much better quality. Fans of this medium can take advantage of convenient automatic station search.

Intuitive and comfortable handling system

The device - in addition to an easy-to-use control panel disposed on a speaker - offers also a wireless remote control that supports all functions of the device.

Working time and speakers battery

A fully charged Vibro Radio speaker works for up to 6 hours. The built-in Li-Ion battery is charged by the supplied USB cable.
