

SOFTWARE (FIRMWARE) UPDATE – ARIVA T70

Ferguson offers software upgrade capability for your Ariva using USB portable memory. After you have completed software upgrade, your receiver will typically perform better. What improvements are made depends on the upgrade software you are using as well as the software your receiver contained before the upgrade. You can execute the software upgrade procedure yourself.

You will need a USB storage formatted as FAT! It is not possible to upgrade from USB storage formatted as NTFS.

1. Unzip and copy .BIN (.AP file in Ariva T60) file to the root folder of USB memory.
2. Turn on receiver and insert USB memory to USB port.
3. On remote control, press “MENU” button.
4. Go to to “Tools” page
5. Enter “USB upgrade” menu item.
6. Select desired software file
7. Press “OK”.
8. The software upgrading takes a few minutes to be complete.

9. When the software is successfully upgraded, the receiver restart.
 10. Next please restore default settings (Menu Tools > Restore Factory Default).
-

Note: The software version can be checked on TV screen. On remote control, press “MENU” button. Go to to “Tools” page Enter “Information” menu item. Check “SW Version” (second line).
