

24"

Ferguson V24HD273

The model Ferguson V24HD273 is equipped with a HD Ready display and is additionally supported by **Crystal Clear technology**.

Conventional TV displays diffuse light onto the surface, resulting in a reduction in the intensity image and a deterioration in the quality of the black color.

Crystal Clear technology diffuses the light with the same intensity in all screen locations, and thus leads to a better reproduction of the black objects. In this way, by a precise color, sharpness and motion reproduction. Because of that action movies, series and sports events get a new, more natural dimension. The wide range of available entertainment features is another important advantage of this TV series. The DVB tuner provides instant access to digital channels in the DVB-T and DVB-C standard and an integrated HDMI interface provides support for a wide range of HD devices such as Blu-ray players, game consoles and PCs. After connecting a USB device, the user is given the opportunity to play multimedia content directly to the television. This model supports the common video formats, including HD content with subtitles support. USB port lets you play many video, music and picture files, which makes the device a flexible alternative to all existing multimedia players on the market. In addition, our model was equipped with a hotel mode and allows the administrator full control over the device. This feature is especially interesting for hotel and guest house owners who want to avoid unauthorized access to the TV settings and thus limiting maintenance and repair costs.

Certificate of UPC compliance

Our TV platform works seamlessly with the UPC content provider.

CI+ module standard support

innovation!

Dual DVB Tuner
